SOURCE OF KNOWLEDGE ON SUSTAINABILITY

DESIGN STRATEGY – HOW TO USE TEDS TEN 16 APRIL

How can you limit the environmental and social impact of a fashion product? How can design parameters influence waste, recyclability, chemical use, and energy- and water consumption? At this Fabric Source Session, Professor Early and Bridget Harvey will host a hands-on-workshop on how to use TED's TEN sustainable design strategies so you can get answers to these questions and many more. TED's TEN have emerged due to the need for a toolbox that helps designers navigate the complexity of sustainability issues and offers real ways for designing 'better'.

Simultaneously TED will exhibit pieces and creations made based on these principles to inspire the work you can do by using this tool.

Due to few available seats, companies have priority and seats are given based on a first-come, first-served basis.

FORM: Workshop (held in English) and exhibition open for public

DATE: Thursday, 16 April 9.00 AM to 11.30 AM CET (Exhibition also open Friday, 17 April)

LOCATION: Guldbergsgade 29N, 2200 København N

REGISTRATION: rsvp@fabricsource.dk, no later than 13 April
